Background Concept Details

Design

Background Inspired by European design trends and attention to detail, combined with Chinese tradition and craftsmanship. Integrating the quality of SharpSpeed, the resulting international series not only has a cross-cultural appearance but also embodies the ideal quality of Chinese manufacturing.

Concept The sofa blends European armor elements with the inspiration of Chinese traditional craftsmanship. Its upright and orderly frame paired with elegant, soft cushions, offers both delicacy and comfort. Systematic design thinking, combined with modular accessories, allows for the free interchange of armrests and backrests, presenting exceptional versatility in different spaces.

Design

Legs

The design of the sofa legs is suspended above the base frame, with a curvature at the front and back. The single-seater sofa features four independently angled legs, while other sizes have two sets of straight legs.

Design

Exterior Frame

The exterior frame consists of detachable back panels, facilitating easy assembly and disassembly, with interchangeability among different sizes. The frame is wrapped in leather around the back panels, bordered with stitching.

Design

Backrest

The backrest is trapezoidal, narrower at the top and wider at the bottom, fitting the back comfortably while maintaining a broad shape. Stitching is featured along both sides.

Design

Cusion

The optional armrest cushions are designed in the shape of a knife handle, with an inner curve that fits snugly against the backrest.

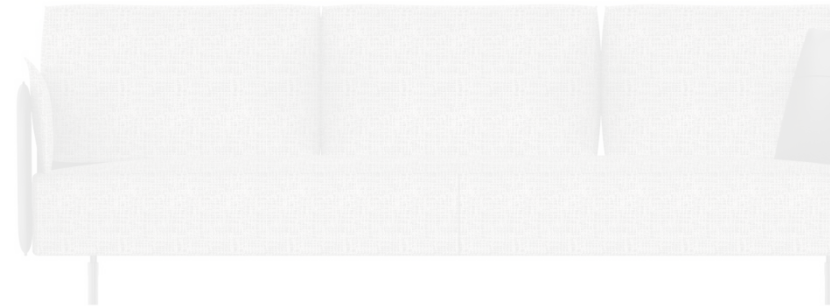

The optional square throw pillows feature a cross-shaped stitching on the surface.

Instruction

Product Usage Precautions:

1. After unboxing, please check for any damage or other quality issues on the product's exterior, and ensure all parts are present.
2. Place the product in an indoor environment with normal temperature and humidity. Do not place near fire sources or damp walls to prevent material swelling, mildew, or delamination; Avoid air conditioning vents; prevent direct sunlight to avoid deformation, cracking, and fading.
3. Cleaning and maintenance: Wipe the leather parts with a cloth dampened with water or a neutral cleaner, and then dry with a clean cloth.
